Views View Filters - Relationships with Taxonomy Term and User I'm struggling with a specific view filter, as I've never encountered anything like it before. In my view, there is a Taxonomy Vocabulary called "Section" and a Taxonomy Term called "About".

When viewing a term, there is an entity reference field. This field's filter is Taxonomy term: About. The block where the content appears, is viewed as a View of an article which has the Vocabulary "Section" chosen. The Vocabulary "Section" has a term reference field for the Taxonomy Vocabulary "About". When I use filter criteria provided for the view, I get no results. Any help? A: As I figured out, it is set to exclude Taxonomy Term. This is no problem per se. I just figured it out by implementing the following: 1) I copied the exposed filter on the View, changed its name to something else, deleted the original. 2) Changed the exposed filter form to an Entity Reference field and set it up to be filtered by Taxonomy Term. 3) Edited the exposed filter
